### Foreword

How can we make the world a more generous place; how can we encourage more people to give their time or money to help others, be it by supporting organisations to do good, or by a random act of kindness for a stranger?

When CAF first conceived the idea for the World Giving Index five years ago, we wanted to encourage people across the world to start asking these questions, and start thinking about creating the conditions that would make the world more charitable.

This year's index shows welcome increases in the numbers of people giving their money, volunteering their time and helping strangers. It shows the power of those three measures to look at generosity, with the United States, the world's philanthropic powerhouse, leading the index alongside Myanmar, a developing country that has endured many decades of isolation.

The index shows high levels of generosity in countries facing turmoil – reflecting a pattern of giving in post-conflict nations as people help others through the most difficult of times. And it shows people's innate desire to help others, even in nations which do not have anything like the standard of living enjoyed in the West.

But despite that, the proportion of people saying they have donated money in developed and developing countries has fallen slightly. There is also little correlation between a country's economic position and its place on the World Giving Index, showing once again that we must not take it for granted that economic prosperity will automatically equal a rise in generosity.

We have taken the World Giving Index as our starting point to explore what could happen if the world's rapidly-expanding middle classes come to give some of their newly-acquired disposable income to charitable causes like many countries in the developed world. If for example they give in line with the United Kingdom, the potential resources for good would be enormous.

As the world slowly pulls out of the economic crisis which has engulfed the global financial system and affected all of us over the past five years, we need to focus on how to build the emerging middle classes' confidence in an independent, trusted, robust and effective civil society that can harness people's enthusiasm to give and effect real change to transform the world for the better.

John Low

Dr John Low Chief Executive Charities Aid Foundation

## About this report

#### Background

The aim of the World Giving Index is to provide insight into the scope and nature of giving around the world. In order to ensure that giving is understood in its various forms, the report looks at three aspects of giving behaviour. The questions that lie at the heart of the report are:

#### Have you done any of the following in the past month?

Donated money to a charity?

Volunteered your time to an organisation?

Helped a stranger, or someone you didn't know who needed help?

Fieldwork is conducted by the market research firm, Gallup,<sup>1</sup> as part of its World Poll initiative<sup>2</sup> that operates in more than 160 countries.

#### World Giving Index 2014

This fifth edition of the World Giving Index presents giving data from across the globe over a five year period (2009-2013). The World Giving Index 2014 includes data from 135 countries across the globe that was collected throughout the calendar year of 2013. A full explanation of the methodology used is included in the appendices.

#### World Giving Index ranking and scores

The method used to calculate World Giving Index scores remains identical to previous years. In order to establish a rounded measure of giving behaviour across the world, the World Giving Index relies on a simple averaging of the responses from the three key questions asked in each country. Each country is given a percentage score and countries are ranked on the basis of these scores.

#### About us

Charities Aid Foundation (CAF) is a leading international charity registered in the United Kingdom, with nine offices covering six continents. Our mission is to motivate society to give ever more effectively and help transform lives and communities around the world. We do this by working globally to increase the flow of funds to the charity and non-profit sectors through the provision of philanthropy advice and services.

### Key findings and conclusions

#### The United States strengthens its reputation for charitable giving yet further

This year, the United States is the only country to be ranked in the Top 10 for all three of the charitable giving behaviours covered by the World Giving Index: helping a stranger (1st), volunteering time (joint 5th) and donating money (9th). This performance is reflected in a further rise in the country's overall World Giving Index, from a score of 61% last year to 64% this year.

# First place in the World Giving Index is shared by Myanmar and the United States

Whilst America's strong performance across all forms of giving contributes to its top ranking, Myanmar's position is driven primarily by an incredibly high proportion of people donating money (91%). This reflects the strong Theravada Buddhist community within Myanmar, with its estimated 500,000 monks<sup>3</sup> (the highest proportion of monks to population of any Buddhist country)<sup>4</sup> receiving support from lay devotees. Indeed, the practice of charitable giving or *dana* is integral to religious observance amongst Theravada Buddhists, with it being one of the key paths to earning good merit. The position of Myanmar reminds us how important each country's distinctive culture is in the predilection of its people to be charitable.

#### Giving is about more than just existing wealth

Only five of the countries in this year's World Giving Index Top 20 are members of the G20,<sup>5</sup> a group representing the world's largest economies. Indeed, eleven G20 countries are ranked outside of the Top 50, and three of these are even outside the Top 100. Of the fifteen countries showing the largest increase between their 2013 giving score and their five-year average score, only one is classified as a high income country by the World Bank,<sup>6</sup> clearly demonstrating the greater potential for growth in nascent markets.

#### Disruptive events can impact giving behaviours significantly

Malaysia has experienced a significant improvement across all three ways of giving, resulting in a 26 percentage point increase in its World Giving Index and a move from seventy-first place to seventh. This behavioural change is likely to reflect the humanitarian effort undertaken following Typhoon Haiyan in the neighbouring Philippine archipelago, and is in line with giving uplifts recorded following other natural disasters in China and Japan. It is encouraging that, regardless of geography or culture, people universally appear to respond to those in need.

<sup>3</sup> http://www.nbcnews.com/id/21020964/

<sup>4</sup> Cone and Gombrich (1977) '*Perfect Generosity of Prince Vessantara*' London: Oxford University Press

<sup>5</sup> Members of the G20 are: Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, the Republic of Korea, Mexico,

Russia, Saudi Arabia, South Africa, Turkey, the United Kingdom, the United States of America plus the European Union

<sup>6</sup> World Bank (2014) 'List of Economies'. Available: siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS

#### As last year, the most substantial growth is in the number of people helping strangers

The number of people who helped others grew again by over 200 million in 2013, following a similar increase in 2012. This now equates to approximately 2.3 billion people worldwide having helped a stranger in the last month. Amongst the fifteen countries with the largest positive gap between their 2013 giving score and their five-year average score (many of them 'developing' economies), helping a stranger is the behaviour showing the greatest improvement, with an overall average increase of 12 percentage points. This emphasises the importance of personal interactions in philanthropy, especially in the developing world.

# Youth unemployment worldwide may be impacting on an ability to donate money

Whilst the incidence of helping a stranger and volunteering time continue to grow, giving money has fallen marginally this year. The overall decline in giving money reflects a drop in the proportion of younger people participating in this behaviour, particularly those aged 15-29. In recent years, global youth unemployment has been high and continues to increase. It may be this and a corresponding reduction in disposable income that is contributing to a reduced participation in giving money amongst the young.

#### Women are established as being more likely to give money than men, but only in high income countries

Since 2009, women have become more likely than men to donate money to charity at a global level – this is despite the gap in economic participation that still exists between men and women worldwide. Reflecting this global disparity, women are only more likely to give money in high income countries; in middle and low income countries men are more likely to donate.<sup>7</sup>

<sup>7</sup> Countries have been classified into income groups according to the World Bank (2014) 'List of Economies'. Available: siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS

### Recommendations

Governments around the world should:

- make sure not-for-profit organisations are regulated in a fair, consistent and open way
- make it easy for people to give and offer incentives for giving where possible
- promote civil society as an independent voice in public life and respect the right of not-for-profit organisations to campaign
- ensure not-for-profit organisations are transparent and inform the public about their work
- **encourage charitable giving** as nations develop their economies, taking advantage of the world's growing middle classes.

Through our Future World Giving programme, we have developed a framework of more detailed recommendations that, if followed by governments, should future proof the growth of generosity and provide an enabling environment for improved civil society.

Further information on CAF's Future World Giving programme can be found at: http://futureworldgiving.org

Only includes countries surveyed in 2013. The size of each circle is proportional to the country's World Giving Index score.

### 1 Global view

#### 1.1 The World Giving Index Top 20

The United States shares first place ranking in this year's World Giving Index with Myanmar (Table 1). The score of 64% achieved is the highest on record.

The United States is the only country to rank in the Top 10 for all three kinds of giving covered by the World Giving Index: helping a stranger (1st), volunteering time (joint 5th) and donating money (9th). Myanmar has improved on its joint second place reported in 2013, with an increase from 58% to 64% in the World Giving Index. As highlighted previously, Myanmar's lead ranking is mainly due to an extraordinarily high incidence of donating money, which has seen a further uplift this year to stand at 91% from 85% reported in last year's report.

Nine out of ten people within Myanmar follow the Theravada school of Buddhism,<sup>8</sup> under which the lives of the *Sangha* (ordained monks and nuns) are supported by *dana* (charitable giving) by lay followers of the religion. This clearly translates into a strong culture of charity, with Myanmar ranked first for donating money and 13 percentage points ahead of the second placed country. Sri Lanka, another country with a strong Theravada Buddhist community,<sup>9</sup> also ranked within the Top 10 of the World Giving Index (placed 9th).

The countries which comprise the Top 10 remain largely the same as those reported in 2013. Of most significance is the entrance of Malaysia in seventh place, from a 2013 reported ranking of seventy-one, reflecting a 26 percentage point increase in its World Giving Index score. This change is a broad based one, reflected in large increases across all three giving methods, and across all age groups and genders, suggesting a wholesale behavioural change within Malaysia.

In previous reports we have commented on changes in World Giving Index scores being related to particular events or circumstances. In this instance, Malaysia was surveyed in the period following Typhoon Haiyan which impacted the Philippine archipelago on 8 November 2013. Thus, the increases seen are likely to reflect the desire of the Malaysian people to help neighbours in need, whether that is through helping a stranger, donating money or volunteering.<sup>10</sup>

Another new entrant to the Top 10 is Trinidad and Tobago, ranked 10th with a World Giving Index score of 54%, a nine percentage point uplift since the last time it was surveyed in 2011. Increases have been experienced in all three types of giving, most notably helping a stranger, with a thirteen percentage point increase since the previous measure.

A number of other countries also joined (or rejoined) the Top 20 this year – Bhutan, Kenya, Denmark, Iran and Jamaica. Rankings resulted from a mix of improved performance (particularly Kenya which moved up eighteen places), countries new to the survey entering the index, and other countries not being surveyed this year.<sup>11</sup>

<sup>8</sup> CIA Factbook: https://www.cia.gov/library/publications/the-world-factbook/geos/bm.html

<sup>9</sup> Approximately 69% of Sri Lankans follow Theravada Buddhism (https://www.cia.gov/library/publications/the-world-factbook/geos/ce.html)

<sup>10</sup> Further discussion about the impact of events can be found in section 5

<sup>11</sup> Countries in the Top 20 for the 2013 report that were not surveyed for the 2014 report are: Hong Kong, Norway, Qatar, State of Libya, Switzerland

Table 1 Top 20 countries in the World Giving Index, with score and participation in giving behaviours

	World Giving Index ranking	World Giving Index score (%)	Helping a stranger score (%)	Donating money score (%)	Volunteering time score (%)

Only includes countries surveyed in 2013.

Data relate to participation in giving behaviours during one month prior to interview.

World Giving Index scores are shown to the nearest whole number but the rankings are determined using two decimal points.

Analysis covering the five-year period 2009 to 2013<sup>12</sup> (Table 2) shows that eight countries are included in the five-year Top 20 that do not appear in this year's list: Cyprus, Finland, Germany, Hong Kong, Liberia, Qatar, Thailand and Turkmenistan. These countries were either not surveyed during 2013, were displaced by new entrants or were found not to have levels of engagement as high as in previous years.

Only six of the countries appearing in this Top 20 list are members of the Group of Twenty (G20), this group is made up of 19 of the world's largest economies plus a representative from the European Union.<sup>13</sup>

<sup>12</sup> Relates to the year that surveying took place – equates to 2010-2014 World Giving Index reports

<sup>13</sup> Members of the G20 are; Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, the Republic of Korea, Mexico, Russia, Saudi Arabia, South Africa, Turkey, the United Kingdom, the United States of America plus the European Union

Five-year score and averages: data represents average participation in countries surveyed in three or more different calendar years in period 2009–2013.

One-year score: only includes countries surveyed in 2013.

Data relate to participation in giving behaviours during one month prior to interview.

World Giving Index and difference scores are shown to the nearest whole number but the rankings are determined using two decimal points.

#### 1.2 Global trends across behaviours

Globally, the average percentage of people who helped a stranger or volunteered time increased year-on-year, whilst the proportion of people donating money decreased slightly, down 0.6 percentage points (see Figure 1). This is of interest given that the three giving behaviours have previously tended to move up or down in unison.

Figure 1 Global gross domestic product (GDP) growth rate and global participation in donating money, volunteering time and helping a stranger, over 5 years

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in giving behaviours during one month prior to interview.

GDP data is sourced from the International Monetary Fund's World Economic Outlook database. Data is given in terms of constant year-on-year prices.

The fall in donating money appears to be more in tune with the slow down reported in GDP growth between 2012 and 2013 (down 0.2 percentage points). As last year, helping a stranger and volunteering time continue to run counter to GDP, with both kinds of giving showing an upward trend since 2011.

While both developed and developing economies<sup>14</sup> have seen a decrease in donating money (by 0.8 and 1.2 percentage points respectively), transitioning economies have seen an increase in this behaviour (see Figure 2).

<sup>14</sup> Based on UN classifications, countries are classified into three broad categories: developed economies, economies in transition and developing economies. These groups reflect basic economic conditions in the country and are mutually exclusive for the purposes of analysis. 'Developing' describes economies that are generally in the process of industrialisation with less infrastructure and lower living standards than a 'developed' economy. 'Transitioning' economies are those that, while they may also be looking to develop, are in the process of transitioning from a Soviet-style planned economy to a market economy. Full list available: http://www.un.org/en/development/desa/policy/wesp/wesp\_current/2014wesp\_ country\_classification.pdf

Figure 2 Percentage point changes in scores for each behaviour from 2012 to 2013, by economy status

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in giving behaviours during one month prior to interview.

Clearly, a prosperous economy does not guarantee higher levels of giving money – a fact that is further demonstrated by BRIC countries.<sup>15</sup> Despite their expanding economies, only China has seen an increase in donating money to charity since last year, up from 10% to 13% (although all four countries have seen an increase in volunteering scores this year). Similarly, there is little consistency across another recognised group of emerging economies, MINT,<sup>16</sup> with Indonesia the only one to have seen an increase in the proportion of its people donating money.

This illustrates how the individual nature of a country is central to driving charitable behaviour, with an uplift in giving often dependent on a country taking some positive action to encourage this behaviour.

Figure 3 shows how the fluctuations in participation percentages (as shown in Figure 1) affect actual population estimates for the numbers demonstrating each behaviour. Despite the slight fall in the percentage of people donating money, population growth means that the absolute number of people giving money rose by around 84 million people worldwide. The number volunteering time increased by over 132 million, whilst the number of people helping a stranger increased by a further 226 million year-on-year.

<sup>15</sup> BRIC refers to a grouping of countries – Brazil, Russia, India and China – identified as a new generation of emerging economies

<sup>16</sup> MINT refers to Mexico, Indonesia, Nigeria and Turkey – a more recent grouping of promising economies

Figure 3 Global number of people donating money, volunteering time and helping a stranger, over 5 years

Calculated using UN adult population numbers.

Data represents the number of people participating in giving behaviours in countries surveyed in every calendar year, in period 2009-2013.

Data relate to participation in giving behaviours during one month prior to interview.

# 2 Three giving behaviours

#### 2.1 Helping a stranger

#### 2.1.1 Top 10 countries for helping a stranger, by participation and population

The two tables below show the countries with the highest percentage of people helping strangers and the countries with the highest number doing so.

The United States is the only country to feature in both lists, with Americans more likely than any other nationality to help strangers, with approximately 203 million individuals doing so.

Only three of the countries ranked in the Top 10 for participation (Table 3) were also present last year: United States, New Zealand and Kenya. All Top 10 countries apart from Liberia have matched or exceeded their highest participation rates recorded previously. Liberia was last surveyed in 2011 when 81% helped a stranger and it was ranked top for this behaviour.

Iraq has experienced a significant increase in those helping a stranger, rising from ninetieth position with 42% participation last year, to now be placed joint second. Uplift in this way of giving also contributes to Iraq's rise in the overall World Giving Index, up from 89th to 43rd, with an increase in score of 13 percentage points. It is possible that the escalating violence of the Iraq insurgency during 2012-2013 has driven this change, with an increased need and desire to assist others who have been affected.

China and India, the world's most populous countries, continue to dominate the list of countries with the largest numbers of people helping strangers (see Table 4), despite their below average participation rates (36% and 39% respectively). The countries comprising this group remain as last year, with little movement recorded.

# Table 3 Top 10 countries by participation in helping a stranger

Helping a stranger country and rankir		People (%)			
United States of America	1	79			
Iraq Trinidad and Tobago	2	75			
Jamaica Liberia	4	73

Only includes countries surveyed in 2013. Data relate to participation in helping a stranger during one month prior to interview. Calculated using UN adult population numbers. Only includes countries surveyed in 2013.

Data relate to participation in helping a stranger during one month prior to interview.

#### 2.1.2 Helping a stranger and gender

In line with the overall uplift, the likelihood of both men and women to help strangers has once again increased this year (see Figure 4). The participation rates of men at 49.7% and women at 46.5% are the highest levels recorded to date.

Whilst men have always reported higher participation in this behaviour, the gap between the genders appears to be growing once again, with 3.2 percentage points between men and women in 2013, compared to 2.9 percentage points in the 2012 survey year, and 1.9 percentage points in 2011.

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in helping a stranger during one month prior to interview.

#### 2.1.3 Helping a stranger and age

All age groups have experienced an increase in the proportion of people who helped a stranger in the month prior to interview (see Figure 5). However, the uplifts between the 2012 and 2013 surveys are not as notable as those experienced between 2011 and 2012, particularly amongst the two younger age groups (15-29s and 30-49s up by only 0.6 and 0.5 percentage points respectively). Despite this, these two groups still remain more likely to demonstrate this behaviour, with half of those aged 30-49 having done so.

Those aged 50 and over have experienced a 1.5 percentage point increase in the proportion of people who have helped strangers.

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in helping a stranger during one month prior to interview.

#### 2.2 Donating money to a charity

#### 2.2.1 Top 10 countries for donating money, by participation and population

Table 5 shows the ten highest ranked countries in terms of the percentage of people who donated money to charity in the last month, and Table 6 shows the countries with the largest actual number of people donating money to charity.

Five countries appear across both lists: Indonesia, Myanmar, Thailand, the United Kingdom and the United States. The United States is the only new entrant to the participation Top 10 (Table 5), having previously been ranked thirteenth in the 2012 survey. This improved placement means that the United States now appears in the Top 10 for participation and numbers of people across all three kinds of giving – the only country to do so.

Myanmar continues to top the participation table, with an incredible 91% of people (equating to 36 million individuals) having donated money, thirteen percentage points higher than second placed Malta. Thailand is placed third – as with Myanmar, a high proportion of Theravada Buddhists within Thailand<sup>17</sup> practising *Sangha Dana* is likely to influence this participation rate.

In relation to the number of people donating money (see Table 6), the only new entrant to the Top 10 is Iran with 30.7 million individuals giving money in the month prior to interview. This is driven by a 52% participation rate with Iran ranked 20th in the world for giving money. Iran's performance remains similar to when the country was last surveyed in 2011.

Despite having smaller adult populations than China, both India and the United States have more individuals donating money to charity. The United States has just over a fifth of the total adult population of China (257 million vs. 1,135 million respectively)<sup>18</sup>, and yet the much higher proportion of Americans donating money (68% vs. 13% in China) results in a difference of approximately 27 million people.

## Table 5 Top 10 countries by participation in donating money

Donating money by People country and ranking (%)

<sup>18</sup> World Population Prospects, the 2012 Revision, June 2013, United Nations Department of Economic and Social Affairs: http://esa.un.org/wpp/

#### 2.2.2 Donating money and gender

Women continue to be marginally more likely than men to give money to charity, with the differential of 0.8 percentage points remaining consistent over the last three years. In 2008, a higher proportion of men donated money, with the genders equalling in 2009.

The higher propensity of women to give money is particularly interesting given that the gap between men and women in economic participation around the world remains wide.<sup>19</sup>

Reflecting this global disparity, it is only in developed economies<sup>20</sup> that women are more likely to donate money than men (43.7% vs. 36.7% for men). In addition to economic participation, this is likely to reflect a broader gender equality within developed markets. Men are slightly more likely than women to donate money in transitioning (17.5% vs. 16.8% for women) and developing economies (25.1% vs. 23.2% for women).

#### Figure 6 Global participation in donating money, by gender, over five years

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in donating money during one month prior to interview.

<sup>19</sup> Global Gender Gap Report 2013, World Economic Forum. http://www3.weforum.org/docs/WEF\_GenderGap\_Report\_2013.pdf

<sup>20</sup> Based on UN classifications. 'Developing' describes economies that are generally in the process of industrialisation with less infrastructure and lower living standards than a 'developed' economy. 'Transitioning' economies are those that, while they may also be looking to develop, are in the process of transitioning from a Soviet-style planned economy to a market economy. Full list available: http://www.un.org/en/development/ desa/policy/wesp/wesp\_current/2014wesp\_country\_classification.pdf

#### 2.2.3 Donating money and age

Worldwide, older people are more likely to give money to charitable causes, with this being constant since the World Giving Index was first published in 2010.

Whilst participation amongst those aged 50 and over has remained constant since 2012, the percentage of younger people donating money has declined, the larger fall of 2.2 percentage points being amongst those aged 15-29.

This fall may be a reflection of growing unemployment, and so reduced disposable income, amongst younger people worldwide. There were an estimated 201.8 million unemployed people around the world in 2013, with an increase of 4.9 million on the previous year, and equating to a total global unemployment rate of 6%. Young people, aged 15 to 24, are harder hit with an unemployment rate amongst this group of 13.1%.<sup>21</sup>

As a result of the declines recorded within the younger age groups, the participation gap between those aged 50+ and those under 50 has once again widened to the same level of differential seen prior to 2012.

Figure 7 Global participation in donating money, by age, over five years

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in donating money during one month prior to interview.

#### 2.3 Volunteering time

#### 2.3.1 Top 10 countries for volunteering time, by participation and population

The Top 10 highest-ranked countries in terms of the proportion of people who volunteer time are shown in Table 7, whilst Table 8 shows the ten countries with the highest number of people volunteering.

The eight countries with the highest participation rates also all appeared in the Top 10 in last year's report. Turkmenistan retains its top position for the percentage of people volunteering time, although with a slight decline on the levels seen previously (53% vs. 57% in 2012). Uzbekistan and Tajikistan also appear in the Top 10 for volunteering. These former Soviet States all share a culture of 'subbotnik', the giving up of a Saturday to volunteer or perform unpaid labour. In some instances mandatory subbotniks have been introduced to fill a gap in services, and so it is possible that such instances inflate the 'volunteering' levels recorded in these countries.

Four countries featured in this year's Top 10 for volunteering time were not present last year. This year is the first time that Bhutan has been included in the World Giving Index, whilst volunteering in Ireland and Nigeria has increased by four and five percentage points respectively, lifting them from their most recent positions just outside the top 10 (ranked 11th and 14th in 2012). Most notable is the increase in volunteering recorded within Malaysia, from 19% in 2012 to 41% in 2013, and so rising fifty places in the volunteering rankings. As mentioned earlier (section 1.1), this may be due to their humanitarian response to Typhoon Haiyan.

As previously, India has the most people volunteering their time, with an estimated 186.5 million doing so (see Table 8). China only achieves fourth place on this list, even being surpassed by Indonesia despite having over six times as many citizens – this ranking is due to only 6% of the Chinese people surveyed volunteering time (although this does represent a slight increase on the 4% recorded in 2012).

		-
C	) _

Only includes countries surveyed in 2013. Data relate to participation in volunteering time during one month prior to interview.

# Table 8 Top 10 countries by the number of people volunteering time

Volunteering time country and rank		People (m)
India	1	186
United States of America	2	113
Indonesia	3	71
China	4	68
Nigeria	5	40
Japan	6	31
Philippines	7	25
Brazil	8	24
Russian Federation	9	22
Myanmar	10	20

Calculated using UN adult population numbers.

Only includes countries surveyed in 2013.

Data relate to participation in volunteering time during one month prior to interview.

Myanmar is new to the Top 10 for the total number of people volunteering time, while Japan has reentered, having not been surveyed for last year's report. Both countries have experienced uplifts in the percentage of people volunteering since the last time they were surveyed (plus eight and seven percentage points respectively),<sup>22</sup> which, in combination with population increases, and the relative performance of other countries, sees them enter the Top 10. Japan is the only country where volunteering time is the most common of the three charitable activities.

#### 2.3.2 Volunteering time and gender

In line with the overall uplift in giving time, both men and women record increased volunteering levels year-on-year. Men report an uplift of 1.7 percentage points and women 1.2 percentage points, with the differential between the two genders now at 3.3 percentage points – the widest gap since 2010.

Figure 8 Global participation in volunteering time, by gender, over five years

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in volunteering time during one month prior to interview.

<sup>22</sup> Prior to 2013, Japan was last surveyed in 2011, Myanmar was last surveyed in 2012

#### 2.3.3 Volunteering time and age

Those aged 30-49 remain the most likely across the world to give their time, although the 50+ age group has seen the largest increase in volunteering participation year-on-year (up by 1.9 percentage points) to now almost be on a par with the youngest age group.

Data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in volunteering time during one month prior to interview.

## 3 Continental comparisons

#### 3.1 Continental World Giving Index scores

Figure 10 contrasts this year's World Giving Index score for each continent with the average score over the past five years. The purpose of the chart is to expose any long-term trends. If the one-year view is higher than the five-year score this suggests an increasingly positive giving environment, and vice versa.

Oceania and Africa register no real difference in their one-year and five-year giving scores.<sup>23</sup> In 2012, these comparative measures had suggested a deteriorating picture for both continents, and so a more consistent picture actually suggests some improvement a year on.

Europe and the Americas record a two percentage point positive differential. Although this may seem a small difference, given that even one per cent of the population of a continent represents millions of people, such differences should still not be ignored.

Asia sees the largest positive increase, with the one-year score being four percentage points higher that the five-year average score. The strongest performing sub-region within Asia is South Eastern Asia with a giving score of 44% and comprising Cambodia, Indonesia, Malaysia, Myanmar, Philippines, Thailand and Vietnam, with five of these seven countries being ranked within the World Giving Index Top 30.

Oceania remains by far the most generous continent. However, unlike the other continents, all of whom are comprised of over twenty plus countries, only two (Australia and New Zealand) of the twenty-three countries and territories in Oceania are surveyed in a typical year. Nonetheless, this high figure of 57% stands as a compliment to the strength of civil society in these two countries.

The other continents are more closely bunched together; all lying within a seven percentage point range for this year's World Giving Index score.

Figure 10 Continental World Giving Index score and 5 year score

World Giving Index one-year score: calculated using countries surveyed in 2013 only.

World Giving Index five-year score: data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in giving behaviours during one month prior to interview.

<sup>23 -0.33</sup> and +0.37 differential respectively

#### 3.2 Continental giving behaviour scores

Figure 11 explains how the people of different continents are generous in different ways.

Across all continents, helping a stranger is the most common way of giving. Previously, donating money was the lead behaviour in Oceania, but a year-on-year fall in this (67% in 2012 to 64% in 2013) means that it now also conforms to the global picture.

However, even with consensus on the lead behaviour, the continents do differ in their giving patterns. In the Americas, Asia and Europe, helping a stranger is around twice as commonplace as volunteering, and donating money lies somewhere in between the two.

In Africa, helping a stranger is around three times as commonplace as both volunteering time to an organisation or donating money to a charity, suggesting that generosity in this continent is far more to do with 'informal' personal and community based assistance.

In Oceania, the proportions helping a stranger and donating money are much more even, with these ways of giving only one and a half times more commonplace than volunteering time. However, there is a negative differential between the one-year and five-year scores for donating money, suggesting that the giving environment in this area could be deteriorating and may be something to monitor for the future.

Figure 11 Continental participation in donating money, volunteering time and helping a stranger, and 5 year participation

Participation one-year score: calculated using countries surveyed in 2013 only.

Participation five-year score: data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013.

Data relate to participation in giving behaviours during one month prior to interview.

## 4 Giving in developing countries

As already outlined, there is little consistency in giving participation within some of the commonly recognised emergent market groups, such as BRIC and MINT (see Section 1.2). Analysis does however show increasing engagement with giving in some developing economies. Fifteen countries have seen their 2013 score rise above their five-year average score by five percentage points or more and only one is classified by the World Bank as a high income country.<sup>24</sup> Indeed, all but one of these countries are classed as developing or transitioning economies by the UN,<sup>25</sup> and seven of the fifteen are in Asia.

Figure 12 Countries with a 2013 score at least 5 percentage points higher than average 5 year score

World Giving Index 2013 score: calculated using countries surveyed in 2013 only.

World Giving Index five-year score: data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013. Data relate to participation in giving behaviours during one month prior to interview.

<sup>24</sup> World Bank (2014) 'List of Economies'. Available: siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS

<sup>25</sup> Based on UN classifications. 'Developing' describes economies that are generally in the process of industrialisation with less infrastructure and lower living standards than a 'developed' economy. 'Transitioning' economies are those that, while they may also be looking to develop, are in the process of transitioning from a Soviet-style planned economy to a market economy. Full list available: http://www.un.org/en/development/desa/ policy/wesp/wesp\_current/2014wesp\_country\_classification.pdf

Scores for Nepal, Guinea, Iraq, Malaysia, South Africa and Macedonia for all three types of giving are at least five percentage points above their five-year scores. While Malaysia has seen the biggest rise for each of the three activities, there have been notable improvements in a number of other countries. Helping a stranger is the activity that has seen the most improvement – on average the fifteen countries increased their participation by 12 percentage points (see Figure 13).

Figure 13 Average 2013 vs 5 year scores for the 15 most improved countries (%)

World Giving Index five-year score: data represents average participation in countries surveyed in three or more different calendar years in period 2009-2013.

Data relate to participation in giving behaviours during one month prior to interview.

These countries demonstrate the potential for growth in the charitable sector in developing and emerging markets. CAF's Future World Giving programme reports how, if long term forecasts for economic growth and levels of individual wealth are borne out over the next twenty years, millions of people will be lifted from a subsistence lifestyle to one of having a disposable income. If levels of giving can reflect increases in disposable income, there is enormous potential to increase charitable donations, especially within emerging markets.<sup>26</sup>

### 5 Events and their impact on giving

#### 5.1 Impact of natural disasters

As highlighted previously, Malaysia has seen a significant change in its World Giving Index performance this year, with a 26 percentage point increase since the 2013 report and a move from 71st to joint 7th position on the overall index.

Data relate to participation in giving behaviours during one month prior to interview. Data relate to participation in giving during one month prior to interview in the survey years of 2012 and 2013 (reporting years 2013 and 2014).

Malaysia was surveyed in the period following Typhoon Haiyan which impacted the neighbouring Philippine archipelago on 8 November 2013. This devastating super typhoon killed over 6,000 people, displaced more than 4 million people, and destroyed at least one million houses,<sup>27</sup> causing at least US\$14.5 billion in damage.<sup>28</sup>

Similar uplifts in giving behaviours have been experienced following other natural disasters. For example, after severe flooding in China during 2010<sup>29</sup> which caused more than 1,500 deaths, affected more than 230 million people as well as causing over US\$20 billion in damage, there was a 13 percentage point increase in the proportion of people helping a stranger (28% in 2009 to 41% in the 2010 survey year). Previously in China, donating money participation peaked in 2008, the year of the devastating Sichuan earthquake, whilst in Japan, donating money peaked in 2011 following the catastrophic earthquake and tsunami in March of that year. From these examples, it is encouraging to see that across diverse cultures and geographical locations, people will respond to those in need, whether those people are compatriots or live in other nation states.

However, whether this behavioural change is maintained long-term is questionable. In China, the proportion donating money has tailed off since 2008, whilst helping a stranger initially declined in 2011 before increasing again in recent years, perhaps in response to the series of natural calamities that have occurred in China since this time (2012 and 2013 saw a number of serious floods, typhoons, landslides and earthquakes). Since 2011, Japan has experienced a decline in those donating money, but an increase in those volunteering time.

It may be that countries need to improve their ability to harness such 'emergency' generosity for the longer-term benefit of their people. Part of this is ensuring that the necessary infrastructures are in place to encourage individual giving, which often requires a broader development of civil society within a country.<sup>30</sup>

<sup>30</sup> CAF Future World Giving – Enabling an Independent Not-for-Profit Sector (2014) https://www.cafonline.org/pdf/CAF%20Independence%20 Report-Web.pdf

#### 5.2 Impact of conflict and civil unrest

Unsurprisingly, conflict and civil unrest can also impact on a country's giving behaviours. This is often seen most clearly following the end of hostilities. Previous analysis of the World Giving Index has seen uplifts in helping a stranger for countries in a post-conflict phase such as Sierra Leone, Liberia and the State of Libya.

An over-time analysis of Sri Lanka's World Giving Index scores illustrates this pattern well. Sri Lanka's civil war which raged for 26 years killing an estimated 80,000-100,000 people ended in May 2009.<sup>31</sup> Looking at the WGI data over the period 2006-2013 shows that engagement following the end of the civil war across all types of giving rose, by at least eight percentage points.

Data relate to participation in giving behaviours during one month prior to interview.

It is possible that other non-conflict related events may have contributed to this uplift, for example, the impact of monsoonal flooding and any associated humanitarian response. However, monsoonal flooding also occurred during the conflict period, and no uplift in giving behaviours was recorded.

It is also normal when conflicts end for the economy of that country to improve, and a growing economy can enable more people to be charitable. In Sri Lanka, the initial increase in charitable behaviours occurred prior to the economy picking up, but continuing growth no doubt facilitates an environment for sustained giving.

The ending of civil conflict therefore appears to have a positive impact on people's social behaviours and levels of engagement, suggesting that people reach out to wider society as part of the post conflict repair process.

Countries' scores indicate a rise or fall in score of 3 percentage points or more since the 2012 survey.

▲ Scores have increased by at least three percentage points.

Scores have decreased by at least three percentage points.
 Scores in plain text have seen a change of less than three percentage points either way, or were not surveyed in 2012.

Only includes countries surveyed in 2013.

Data relate to participation in helping a stranger during one month prior to interview.

Countries' scores indicate a rise or fall in score of 3 percentage points or more since the 2012 survey.

▲ Scores have increased by at least three percentage points.

Scores have decreased by at least three percentage points. Scores in plain text have seen a change of less than three percentage points either way, or were not surveyed in 2012.'

Only includes countries surveyed in 2013.

Data relate to participation in donating money during one month prior to interview.

Countries' scores indicate a rise or fall in score of 3 percentage points or more since the 2012 survey.

Scores have increased by at least three percentage points.

Scores have decreased by at least three percentage points. Scores in plain text have seen a change of less than three percentage points either way, or were not surveyed in 2012.'

Only includes countries surveyed in 2013.

Data relate to participation in volunteering time during one month prior to interview.

# 6 Methodology

This report is primarily based upon data from Gallup's World View World Poll,<sup>32</sup> which is an ongoing research project carried out in more than 140 countries in 2013 that together represent around 94% of the world's population (around 4.96 billion people).<sup>33</sup> The survey asks questions on many different aspects of life today including giving behaviour. The countries surveyed and questions asked in each region varies from year to year and is determined by Gallup. More detail on Gallup's methodology can be viewed online.<sup>34</sup>

In most countries surveyed, 1,000 questionnaires are completed by a representative sample of individuals living across the country. The coverage area is the entire country including rural areas. The sampling frame represents the entire civilian, non-institutionalised, aged 15 and older population of the entire country. In some large countries such as China and Russia samples of at least 2,000 are collected, while in a small number of countries, the poll covers 500 to 1,000 people but still features a representative sample. The survey is not conducted in a limited number of instances including where the safety of interviewing staff is threatened, scarcely populated islands in some countries, and areas that interviewers can reach only by foot, animal or small boat. In all, over 130,000 people were interviewed by Gallup in 2013 and samples are probability-based. Surveys are carried out by telephone or face-to-face depending on the country's telephone coverage.

There is of course a margin of error (the amount of random sampling error) in the results for each country, which is calculated by Gallup around a proportion at the 95% confidence level (the level of confidence that the results are a true reflection of the whole population). The maximum margin of error is calculated assuming a reported percentage of 50% and takes into account the design effect.

#### Calculation of World Giving Index ranking

The percentages shown in the index and within this publication are all rounded to the nearest whole number. In reality though, for our analysis, the percentage scores are all to two decimal points.

Due to rounding therefore, there are some occasions in the ranking of countries where two or more countries appear to have the same percentage, but are not placed equally. This is because there is a small amount of difference in the numbers to two decimal places. This also affects the calculation of percentage point change across years, which is based on the actual figure to decimal places, rather than the rounded number displayed.

In 2013, Gallup changed the way they group the age bands and this has been applied retrospectively to previous years' data. While the revision has affected historical numbers, the overall trends remain largely the same.

Details of each country's dataset available: http://www.gallup.com/strategicconsulting/128171/Country-Data-Set-Details-May-2010.aspx
